Dependable Precision

# SMOOTHEST DRILLING

Suitable for pipes, curved or profiled surfaces - even weld seams, stainless steel up to 2mm, mild steel up to 4mm, nonferrous, plastics, wood up to 12mm. TCT holesaws can be re-sharpened.

**RECOMMENDED  
SPEEDS**

From measurements Ø 16 mm to 30.0 mm, the hole saw is made of one piece. From Ø 31.0 mm, we use specially hardened tool holders to compensate for the torsional power in case of heavy operation, which avoids early shearing off of the tool holder shank. As such, its construction is incomparable with any other design.
